SUMMARY

Software Engineer with experience building scalable web and mobile applications using React, React Native, Angular, TypeScript, Node.js, and REST APIs. Experienced in developing production features, optimizing application performance, implementing secure authentication and RBAC, and resolving security vulnerabilities. Passionate about learning emerging technologies and building reliable, user-focused solutions in collaborative, fast-paced environments.

EXPERIENCE

Daffodil Software Ltd.

Sep 2024 – Present

Software Engineer

Haryana, India

- Developed and maintained production applications using React, React Native, Angular, TypeScript, and REST APIs, supporting enterprise-scale workflows and role-based access.
- Resolved 20+ production and integration issues within a month, improving application stability and release reliability.
- Improved application performance by 35% through lazy loading, pagination, filtering, and search optimizations, contributing to faster page load times and more responsive user experience.
- Migrated React applications across major versions, resolving 20+ dependency conflicts and replacing deprecated libraries with modern alternatives.
- Implemented and remediated SAST security findings across web applications, addressing vulnerabilities involving XSS, insecure URL handling, dependency vulnerabilities, file uploads, and sensitive-data exposure.
- Built reusable frontend architecture including dynamic forms, validation systems, role-aware components, and shared UI patterns across multiple applications.

PROJECTS

School Management System — Mobile App

React Native, TypeScript

- Built a cross-platform (iOS & Android) mobile app from a single React Native + TypeScript codebase, serving four user roles (Student, Parent, Teacher, Guard, Escort) with role-based navigation and access control.
- Implemented caching for offline support and improved app responsiveness for different screen-orientations.
- Configured native device permissions (camera, microphone, storage) for QR scanning, media capture, and document uploads, with graceful handling of permission denial states.
- Integrated live GPS tracking of school transport (buses, vans) via G10 and Google Maps/Places APIs for real-time location search, giving parents live pickup/drop-off visibility.
- Engineered app state and data layer with Redux Toolkit and RTK Query, Firebase Messaging, Crashlytics, and remote config for push notifications, crash monitoring, and production reliability (force-update/maintenance gates).
- Built a reusable UI system (shared hooks, modular components, bottom-sheet pattern) and enforced code quality with ESLint, Prettier, Jest, and Husky pre-commit hooks.

School Management System — Web Platform

React, TypeScript, Tailwind CSS

- Developed the frontend for a multi-tenant school management platform supporting admins, staff, parents, and guards, with organization-aware routing and access control.
- Built data integration pipelines to import live student, employee, event, and policy data from third-party platforms (Skolaro, Veracross, Toddle).
- Integrated FullCalendar to display school events, holidays, and academic schedules in an interactive calendar view.
- Built a real-time community feed (posts, comments, likes, notifications) using Socket.IO for live updates.
- Resolved and remediated SAST security findings across the web Blob that becomes your portrait: a small blob pops in and morphs through shapes, then travels across and settles into the portrait spot. This is the most distinctive one, and it's the one that ties in with your blob photo.application, addressing issues related to XSS, insecure URL handling, window-opener vulnerabilities, dependency vulnerabilities, upload security, and sensitive-data exposure.
- Implemented file handling features - image upload/cropping, PDF/document preview, QR generation, and PDF/Excel export for reporting — with Zod-based form validation across the app.

Vehicle Tracking System

React, TypeScript, Tailwind CSS

- Contributed to a large-scale transportation management platform with multiple dashboards for monitoring vehicles, trips, routes, and operational data.
- Implemented Google Maps-based features for real-time vehicle tracking, live location visualization, and route monitoring.
- Developed trip reports, alerts, route management, and dynamic filtering/pagination for large-scale operational data views.
- Upgraded React and resolved peer dependency conflicts, while refactoring legacy code into reusable UI components and improving maintainability and reducing duplication.
- Maintained a modular, domain-based folder structure and consistent code quality via ESLint, Prettier, and Jest.

TECHNICAL SKILLS

Languages: JavaScript(ES6+), TypeScript, HTML5, CSS3

Frontend Development: React.js, Next.js, React Hooks, React Router, Material UI, Tailwind CSS, Bootstrap

Mobile Development: React Native, Android, iOS, Cross-platform Application Development

State Management and API Integration: RTK Query, REST APIs, JSON

Developer Tools: Git, GitHub, BitBucket, Postman, Android Studio, Xcode, VS Code

Development Practices: Agile, Peer Code Reviews, Debugging, Performance Optimization, Cross-platform Development

EDUCATION

Panipat Institute of Engineering and Technology

Bachelor of Computer Science and Engineering

2021 – 2025

GPA: 8.07
